

# HOW TO OPTIMIZE YOUR INVENTORY MANAGEMENT?

During research projects, scientists handle numerous chemical and biological compounds, consumables and glassware. They must be able to localize at any time their products within the laboratory and to anticipate easily their orders. Dedicated tools to gain visibility on their stocks and to save time for their projects are therefore an undeniable asset!

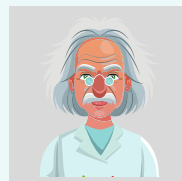

**PROBLEM**

Two scientists, Albert and Cedric, are preparing an experiment in their laboratory, for which they need guanidine hydrochloride. After several hours of work, they realize that their stock of hydrochloride is exhausted. What now?

**AGAINST**

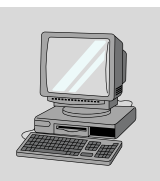

Albert, "old school" researcher used to paper files

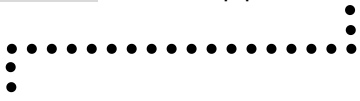

Cedric, a "modern" researcher who uses digital tools

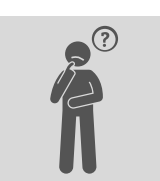

Albert starts by asking his colleagues if an order for his product is already in progress.

His colleagues do not know if the product has been ordered, so Albert places an order with the supplier.

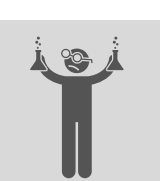

The order is received by Albert's team and stored somewhere in the lab without noting the location.

Soon afterward, Albert checks with his colleagues to know if his product has been delivered.

As his colleagues don't know where the product was stored, Albert has to check all the shelves in the lab.

Albert finally finds the product he ordered and realizes that there was one more bottle in stock.

Cedric connects to Ineon Suite with the lab's tablet (or PC) and issues an order request.

The manager validates Cedric's request on Ineon Suite and places the order.

Upon receipt, Cedric's team adds the product to Ineon Suite and updates the stock.

The team affixes an RFID chip on the product and associates it with a container code thanks to the lab's tablet.

They then update the location of the product in the lab by scanning the RFID chip.

Cedric sees on Ineon Suite that his order has been received and immediately finds his product at the registered location.

**Time lost:**  
more than 30 min.

**Time spend:**  
less than 15 min.

## INEON SUITE MAKES ALL THE DIFFERENCE!

**Contact-free** stock update and product localization in the lab

Real-time visibility on your stocks and orders in progress

Access to the molecular structure and all the details of each reagent

Easy to handle and intuitive interface in French & English

Available on PC, smartphone and Android tablet

Affordable pricing according to the number of users

## BENEFITS FOR YOUR INVENTORY MANAGEMENT

- Instant access to reliable and exhaustive information about your reagents
- Easy inventory tracking and real time information
- Contact-free localization of compounds within the laboratory
- Improved planning, faster execution and time savings
